PEAT FILTERS ARE NOT “SYSTEMS.” They are components within sewage treatment systems. PA regulations require 6-month interval inspections of all components when systems include peat bio-filters.

PremierTech warranty service includes inspection of the tank, raking the peat surface, and documentation for the manufacturer.

O&M service should also include inspection of the septic tank for structural integrity.

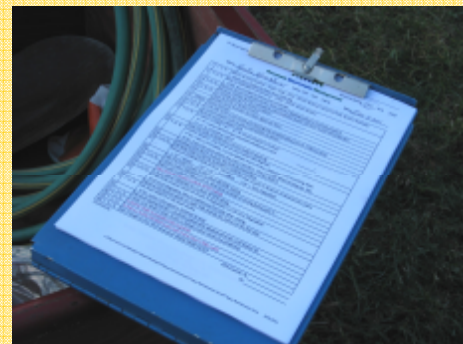

Measurement of sludge accumulation in the septic tank lets the owner know when to schedule pumping.

All peat filters are required to have effluent filters, which need regular cleaning.

Many systems have:
Timers
Controllers
Alarms
Pumps
UV disinfection
All need attention!

Record keeping for reports to you, and to your municipality, if requested.
